

SOLO-TEX

Our SOLO-TEX is a 100% fibre equestrian surface, for versatile leisure use. The fibres interlock to form an elastic floor covering. The synthetic textile material is resistant and comfortable for horse and rider.

RESISTANCE

It is weather, wind, and frost-resistant, and requires little watering and no harrowing (occasional rolling).

USE

We recommend our SOLO-TEX for all disciplines and for leisure riding - jumping up to 1m occasionally. It offers excellent energy return and particularly high strength and durability.

COMPOSITION

We use only post-industrial material (new production) for a high-quality, long-lasting surface, with no waste (no foam or other contaminants).

SAND

No sand is required, but if you have a thin 5cm layer of well-settled sand, it's possible to add a 10cm layer of Solutex on top.

INSTALLATION AND MAINTENANCE

You'll need a drainage base (if outdoors) with retaining boards around it. You then spread the fibre in 5cm layers, evenly, and water it well if it hasn't rained, then roll it with a field roller. Water and roll daily while the soil is settling. Water from time to time as needed. You can ride directly on it, avoiding jumps, lunging or fast work, until it settles sufficiently. To maintain, water as needed and roll from time to time (frequency dependent on use).
